Saif,

This is a mock-up of a revision to the plug-in requirements that my employer drew up. He rethought his original method, and was concerned about people's abilities to reuse the hash. Take a look at his mock-up, and let us know if it's something you could do. It's more in depth, and we know we'd probably need to negotiate the costs.

#### STEP ONE: PURCHASE THROUGH WOOCOMMERCE

#### STEP TWO: ACCOUNT LOGIN/KEYGEN

A login page would be created. The user would login with the username and password generated during their WooCommerce store purchase.

The login page would contain the following table:

*SKU #	Device Serial Number	Registration Key

\*SKU numbers would be populated from the orders associated to the customer account in WooCommerce

A second area would have fields where the customer enters their device **Serial Number**, and the **SKU** from the table to generate a **Key**. The key would automatically populate the table above.

<input type="text" value="SKU"/>	<input type="button" value="SUBMIT"/>
<input type="text" value="Device Serial Number"/>	<input type="button" value="SUBMIT"/>

## **WOOCOMMERCE CUSTOMER INVOICE MODIFICATION**

This is a second item we would need that is not related to the plugin but related to a WooCommerce Modification. We don't know what the best method to go about this is, an add-on/extension to WooCommerce, or a modification to WooCommerce. We would like to set this up using whatever the cost efficient option would be.

Only some products on our site will require access to the login area with the keys outlined above. Other products are free. We need the ability to have a separate invoice from the default WooCommerce invoice sent out specifically for the products requiring a key. That invoice would contain a link to the login page mentioned above, and instructions. Ideally, we could select that invoice when creating a product. Possibly through a drop down menu. We would need to this on a product by product basis. We thought about doing it by category, but that won't work for what we need to do.

Can this be added to the project? And can you let us know what the costs would be? If you would prefer them submitted as separate contracts on Odesk we can do that too.
